PROFESSIONAL SUMMARY

B.Tech graduate (Artificial Intelligence & Data Science) with hands-on experience designing, developing, and testing software applications end-to-end, from requirements through deployment. Solid foundation in Python, object-oriented design, REST API development, and database systems (PostgreSQL, MySQL, MongoDB), gained by building and integrating full-stack applications with FastAPI, Django, and React. Experienced in unit testing, debugging, error handling, and structured logging to ensure reliable, production-quality software, and comfortable collaborating with cross-functional teams to gather requirements and integrate applications with existing systems. Adaptable, detail-oriented, and quick to learn new languages, frameworks, and platforms.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript / TypeScript, SQL
- **Software Development:** OOP, Data Structures & Algorithms, Unit Testing & Debugging, Clean Code Principles, Agile Methodology, Design & Requirements Analysis
- **Backend / APIs:** FastAPI, Django, REST API design & integration
- **Databases:** PostgreSQL, MySQL, MongoDB, DBMS fundamentals
- **Frontend:** React, Next.js, HTML, CSS
- **AI / Agents:** LLMs (Google Gemini API), Multi-Agent Orchestration, Prompt Engineering, Computer Vision
- **Tools:** Git, GitHub, Jupyter Notebook, Power BI, Tableau

PROJECTS

AI Assistant — Multi-Step Agentic Query & Automation Tool

Python | FastAPI | Google Gemini API | REST APIs

- Analyzed requirements and designed a multi-step software workflow to automate a research → summarize → output pipeline, applying software design best practices instead of a single-shot approach.
- Built and integrated a FastAPI backend exposing REST API endpoints to trigger and monitor application workflows for natural-language and image-based inputs.
- Implemented automated data-processing pipelines with structured error handling, logging, and input validation, and conducted unit testing and debugging to keep multi-step runs reliable.
- Integrated a third-party LLM API as the core processing engine, tuning inputs for context-aware, task-specific outputs — direct experience integrating external services into an existing application architecture.

AI Stylist — Fashion Recommendation System

Python | Django | React | PostgreSQL | REST API

- Designed and developed an end-to-end software application using Django and REST API on the backend and React on the frontend, meeting functional requirements defined up front for a clothing recommendation use case.
- Applied clean, maintainable OOP design principles and structured data storage in PostgreSQL, following coding standards to keep the codebase scalable and easy to extend.
- Debugged and validated computer-vision-based attribute recognition logic to ensure reliable, accurate outputs across varied inputs.

EDUCATION

B.Tech — Artificial Intelligence & Data Science | Viswam Engineering College, JNTUA | 2022–2026

Relevant Coursework: Python, Data Structures & Algorithms, DBMS, OOP, Operating Systems, Web Technologies, Big Data Analytics

Intermediate — Sri Venkateswara Junior College, Punganur, Andhra Pradesh | 2020–2022

SSC — Vikas EM High School, Punganur, Andhra Pradesh | 2019–2020

KEY STRENGTHS & LANGUAGES

- Builder mindset — enjoys turning requirements into working, tested software systems end-to-end
- Analytical Thinking & Problem Solving
- Team Collaboration & Cross-Functional Communication
- Goal-Oriented & Deadline-Driven, Adaptable & Quick Learner

Languages: English (Proficient) | Telugu (Native) | Hindi (Conversational)
